# APPROXIMATIONS OF PRACTICE

To help develop the professional identity of the learner.

## METHODS

1. Agriculture Safety and Health
2. Machinery Safety Assignment
3. Prompt
4. Representations
5. Decomposition
6. Approximation
7. Content Analysis??
8. Participant Responses

# FINDINGS

## Machinery Safety Video

Published

Create a video no longer than 5 minutes demonstrating your understanding of the content within the module. You could film this with a phone, tablet, or laptop and upload the video here.

There is quite a bit of freedom with this assignment. I realize some of you may not have access to tractors or farm equipment, but you have other options. For instance, lawn mowers and/or other lawn maintenance equipment, a trucking company would likely have large tractor/trailers and forklifts, a local farmer or rancher would have some equipment, etc. Use your imagination. If you would like to use larger equipment at one of the livestock units on campus, and have a resource to safely help you with that, please make sure you obtain appropriate permission and are mindful of their time and obligations.

This video can resemble a public service announcement or commercial, but feel free to add humor as well (because I have to watch all of them and always enjoy a good laugh). You can include family or friends willing to participate, but you need to participate as the main "actor". Here's some ideas:

- Interview someone while they demonstrate machinery safety,
- Perform a Dirty Jobs style safety skit,
- Examine a piece of farm machinery from the viewpoint of the crocodile hunter,
- Teach a class about safe use of a [insert farm equipment type here].

The information should be accurate and current, even though some of the videos in this module are not! Samples will be shown in class.

## FINDINGS

“It was very impactful. I learn better by actively learning and doing something. Having to find an [sic] equipment and record myself helped me remember what I learned in class.”

“It was really helpful for me to learn how to film and edit videos on my computer”
